PROFESSIONAL SUMMARY

Former practising lawyer turned senior software engineer with 5 years of professional software development experience (2022–present), specialising in full-stack TypeScript, software architecture, backend system design, and enterprise AI integration. Currently sole engineer at **BiggerRocks BV** (Antwerp, Belgium), where I architected **Sprks** — a production ERP for the diamond trading and atelier jewellery industry, with an internal Copilot (Claude API, 38+ tools) and an AI document import pipeline. Legal training drives a precision-first approach to software architecture, technical documentation, and technical communication.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL

Frontend: React.js, Next.js, Redux Toolkit, MUI, Tailwind CSS, Framer Motion, Three.js

Backend & Data: NestJS, Node.js, Prisma ORM, REST APIs, WebSockets, BullMQ, Redis, PostgreSQL, MongoDB

AI & LLM: Claude (Anthropic SDK), OpenAI (GPT-4o Vision, Responses API), tool-use patterns, streaming SSE, retrieval-augmented generation

Cloud & Security: AWS (Lightsail, S3), Vercel, Docker, Git, CI/CD pipelines, JWT, OAuth, RBAC

Testing, Practice & Tools: Jest, Postman, software testing, regression testing, Agile/Kanban, code review, technical documentation, Figma, Shopify

WORK EXPERIENCE

Senior Software Engineer

Feb 2024 – Present

BiggerRocks BV — Antwerp, Belgium (Remote)

- Architected and built **Sprks** — a production SaaS ERP for the diamond trading and atelier jewellery industry — spanning inventory, accounting, production, CRM, and document management across two modules: *Carats* (diamond trading) and *Jewels* (atelier production).
- Engineered a **dual AI system**: a document import pipeline that extracts structured data from PDFs, images, and Excel into ERP records; and an internal **Copilot** (Claude API, **38+ tools**) that mirrors every manual action, running batch operations and giving staff natural-language control of the whole platform.
- Built the **Desk module** — a unified multi-channel CRM inbox (WhatsApp, email, Trengo) with AI ticket classification, auto-routing, a 6-stage Kanban pipeline, real-time WebSocket gateway, and cross-module ticket linking.
- Designed an **automated interest & debt-recovery system** (accrued interest, proactive payment warnings, per-contact accounting reports) — directly contributing to **over $2M in recovered receivables**.

- Integrated live **Rapaport pricing**, GIA/HRD/IGI certificate auto-fill, ZPL label printing, BullMQ workers, and role-based access control across multi-company and legal-entity structures.
- Sole engineer on a full TypeScript codebase (**NestJS + Prisma + PostgreSQL**, **Next.js + Redux + MUI**) — 1,100+ files delivered end-to-end, owning software architecture, technical leadership, and software testing.

Fullstack Developer

Sept 2023 – Feb 2024

OnlyJewels BV — Antwerp, Belgium (Remote)

- Inherited a failed storefront — two prior vendors over ~2 years had delivered broken, unusable builds, the latest a React SPA at **~120s per page** with poor SEO. Rebuilt on **Next.js + SSR in one week**, cutting load to **under 3s (~40× faster)**.
- Re-architected the storefront for SEO with server-side rendering, structured data, dynamic sitemaps, and meta optimisation, replacing a poorly-indexed single-page app.
- Built cost-effective hybrid infrastructure (Vercel, AWS Lightsail, headless WordPress) with Stripe payments, product-catalogue, and real-time inventory integrations.

Frontend Developer

Jan 2022 – Sept 2023

Stripe-Tec

- Built and delivered **three revenue-generating client websites** end-to-end from signed proposals — including gasport.ng, uandudesigns.com, and a Turkey-based healthcare clinic site (under NDA) — handling responsive UI, cross-browser compatibility, and SEO.
- Applied responsive, accessible, mobile-first best practices using JavaScript and modern CSS.

Shopify Developer (Contract, concurrent)

June 2023 – Dec 2023

Zam&Zom LLC

- Delivered a fully custom Shopify e-commerce store (US kids' wear) with theme development, payment gateway integration, inventory management, and SEO configuration — live and processing daily orders post-launch.
- Ensured cross-browser compatibility and mobile-first responsiveness post-launch.

EDUCATION

BL — Barrister-at-Law 2017
Nigerian Law School, Abuja

LL.B (Hons) 2016
University of Nigeria, Enugu Campus

CAREER BACKGROUND

> Practised as a corporate and commercial lawyer (2017–2022) before transitioning fully into software engineering. Legal training — analytical precision, structured reasoning, and clear documentation — directly shapes how I approach system architecture, API design, and technical communication.
