PROFESSIONAL SUMMARY

Former practising lawyer turned senior fullstack engineer with 5+ years of professional engineering experience (2022–present). Specialises in full-stack TypeScript SaaS architecture, backend system design, and enterprise AI integration. Currently the sole engineer at **Biggerocks BV** (Antwerp, Belgium), where I architected and maintain **Sprks** — a production ERP for the diamond trading and atelier jewellery industry, featuring a an internal Copilot (powered by the Claude API) with 38+ tools and an AI document import pipeline. Legal training informs a precision-first approach to system design, documentation, and technical communication that sets my engineering work apart.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript
Frontend	React.js, Next.js, Redux Toolkit, MUI, Tailwind CSS, Framer Motion, Three.js
Backend	NestJS, Node.js, Prisma ORM, REST APIs, WebSockets, BullMQ
Databases	PostgreSQL, MongoDB
Cloud & DevOps	AWS (Lightsail, S3), Vercel, Docker, Git / GitHub
AI & LLM	Claude (Anthropic SDK), OpenAI (GPT-4o Vision, Responses API), tool-use patterns, streaming SSE
Tools	Figma, Postman, Shopify, EmailJS

WORK EXPERIENCE

Senior Fullstack Engineer
Feb 2024 – Present

Biggerocks BV — Antwerp, Belgium (Remote)

- Architected and built **Sprks** — a production-grade SaaS ERP for the diamond trading and atelier jewellery industry, covering inventory, accounting, production, CRM, and document management across two modules: *Carats* (diamond trading) and *Jewels* (atelier production).
- Engineered a **dual AI system**: an intelligent document import pipeline that extracts and structures data from PDFs, images, and Excel files into ERP records; and an internal **Copilot** (powered by the Claude API) with **38+ tools** that mirrors every manual action in the platform — executing batch operations in the background and giving staff complete natural-language control over the entire system.
- Built the **Desk module** — a unified multi-channel CRM inbox (WhatsApp, IONOS email, Trengo) with AI ticket classification, auto-routing, a 6-stage Kanban pipeline, real-time WebSocket gateway, and cross-module sub-ticket linking between Carats and Jewels.
- Designed an **automated interest and debt recovery system** — calculated accrued interest on overdue client balances, dispatched proactive payment warnings, and generated per-contact accounting reports — directly contributing to **over $2M in recovered receivables**.
- Integrated live **Rapaport diamond pricing**, GIA/HRD/IGI certificate auto-fill, ZPL label printing for Zebra printers, BullMQ background workers, and role-based access control across multi-company and legal entity structures.
- Sole engineer on a full TypeScript codebase — **NestJS + Prisma + PostgreSQL** API and **Next.js + Redux + MUI** frontend — 1,100+ files shipped and maintained end-to-end.

Fullstack Developer
Sept 2023 – Feb 2024

OnlyJewels BV — Antwerp, Belgium (Remote)

- Architected and launched OnlyJewels' e-commerce platform and admin portal, **cutting page load time from 120s to under 3s** via SSR optimisation, lazy loading, and image CDN strategies.
- Implemented advanced SEO (structured data, dynamic sitemaps, meta optimisation), significantly improving Google rankings in the Belgian luxury jewellery market.
- Engineered a cost-effective hybrid infrastructure using Vercel, AWS Lightsail, and headless WordPress.
- Built integrations between product catalogue management, Stripe payment processing, and real-time inventory tracking.

Frontend Developer
Jan 2022 – Sept 2023

Stripe-Tec

- Developed and maintained multiple client-facing web applications using React.js, TypeScript, and modern CSS frameworks.
- Shipped responsive, accessible UIs in close collaboration with designers, product managers, and backend engineers on tight deadlines.
- Led code reviews and championed performance and accessibility standards across projects.

Shopify Developer
June 2023 – Dec 2023

Zam&Zom LLC

- Delivered a fully custom Shopify e-commerce store with theme development, payment gateway integration, inventory management, and SEO configuration.
- Ensured cross-browser compatibility and mobile-first responsiveness post-launch.

EDUCATION

BL — Barrister-at-Law 2017
Nigerian Law School, Abuja

LL.B (Hons) 2016
University of Nigeria, Enugu Campus

CAREER BACKGROUND

> Practised as a corporate and commercial lawyer (2017–2022) before transitioning fully into software engineering in 2022. Legal training — analytical precision, structured reasoning, and clear documentation — directly shapes how I approach system architecture, API design, and technical communication. The transition was deliberate: software became the more powerful tool for solving the kinds of complex, structured problems I was trained to work on.
