PROFESSIONAL SUMMARY

Former practising lawyer turned senior fullstack engineer with 4+ years of professional engineering experience (2022–present). Specialises in full-stack TypeScript SaaS architecture, backend system design, and enterprise AI integration. Currently the sole engineer at **Biggerocks BV** (Antwerp, Belgium), where I architected and maintain **Sprks** — a production ERP for the diamond trading and atelier jewellery industry, featuring an internal Copilot (powered by the Claude API) with 38+ tools and an AI document import pipeline. Legal training informs a precision-first approach to system design, documentation, and technical communication that sets my engineering work apart.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL

Frontend: React.js, Next.js, Redux Toolkit, MUI (Material UI), Tailwind CSS, Framer Motion, Three.js

Backend: NestJS, Node.js, Prisma ORM, REST APIs, WebSockets, BullMQ, Redis

Databases: PostgreSQL, MongoDB

Auth & Security: JWT, OAuth, RBAC (Role-Based Access Control)

Cloud & DevOps: AWS (Lightsail, S3), Vercel, Docker, Git, GitHub, CI/CD pipelines

AI & LLM: Claude (Anthropic SDK), OpenAI (GPT-4o Vision, Responses API), tool-use patterns, streaming SSE (Server-Sent Events), retrieval-augmented generation

Testing & QA: Jest, Postman API testing, manual QA, regression testing

Methodology: Agile, Kanban, code review, technical documentation

Tools: Figma, Postman, Shopify, EmailJS

WORK EXPERIENCE

Senior Fullstack Engineer

Feb 2024 – Present

Biggerocks BV — Antwerp, Belgium (Remote)

- Architected and built **Sprks** — a production-grade SaaS ERP for the diamond trading and atelier jewellery industry, covering inventory, accounting, production, CRM, and document management across two modules: *Carats* (diamond trading) and *Jewels* (atelier production).
- Engineered a **dual AI system**: an intelligent document import pipeline that extracts and structures data from PDFs, images, and Excel files into ERP records; and an internal **Copilot** (powered by the Claude API) with **38+ tools** that mirrors every manual action in the platform — executing batch operations in the background and giving staff complete natural-language control over the entire system.
- Built the **Desk module** — a unified multi-channel CRM inbox (WhatsApp, IONOS email, Trengo) with AI ticket classification, auto-routing, a 6-stage Kanban pipeline, real-time WebSocket gateway, and cross-module sub-ticket linking between Carats and Jewels.
- Designed an **automated interest and debt recovery system** — calculated accrued interest on overdue client balances, dispatched proactive payment warnings, and generated per-contact accounting reports — directly contributing to **over \$2M in recovered receivables**.
- Integrated live **Rapaport diamond pricing**, GIA/HRD/IGI certificate auto-fill, ZPL label printing for Zebra printers, BullMQ background workers, and role-based access control across multi-company and legal entity structures.
- Sole engineer on a full TypeScript codebase — **NestJS + Prisma + PostgreSQL** API and **Next.js + Redux + MUI** frontend — 1,100+ files shipped and maintained end-to-end.

Fullstack Developer

Sept 2023 – Feb 2024

OnlyJewels BV — Antwerp, Belgium (Remote)

- Architected and launched OnlyJewels' e-commerce platform and admin portal, **cutting page load time from 120s to under 3s** via SSR optimisation, lazy loading, and image CDN strategies.
- Implemented advanced SEO (structured data, dynamic sitemaps, meta optimisation), significantly improving Google rankings in the Belgian luxury jewellery market.
- Engineered a cost-effective hybrid infrastructure using Vercel, AWS Lightsail, and headless WordPress.
- Built integrations between product catalogue management, Stripe payment processing, and real-time inventory tracking.

Frontend Developer

Jan 2022 – Sept 2023

Stripe-Tec

- Developed and maintained multiple client-facing web applications using React.js, TypeScript, and modern CSS frameworks.
- Shipped responsive, accessible UIs in close collaboration with designers, product managers, and backend engineers on tight deadlines.
- Led code reviews and championed performance and accessibility standards across projects.

Shopify Developer (Contract, concurrent)

June 2023 – Dec 2023

Zam&Zom LLC

- Delivered a fully custom Shopify e-commerce store with theme development, payment gateway integration, inventory management, and SEO configuration.
- Ensured cross-browser compatibility and mobile-first responsiveness post-launch.

EDUCATION

BL — Barrister-at-Law Nigerian Law School, Abuja	2017
LL.B (Hons) University of Nigeria, Enugu Campus	2016

CAREER BACKGROUND

Practised as a corporate and commercial lawyer (2017–2022) before transitioning fully into software engineering in 2022. Legal training — analytical precision, structured reasoning, and clear documentation — directly shapes how I approach system architecture, API design, and technical communication. The transition was deliberate: software became the more powerful tool for solving the kinds of complex, structured problems I was trained to work on.
